Education

VIPS-TC

BTech in Industrial Internet of Things

2024 – 2028

Skills

- **AI / ML:** Computer Vision, YOLOv5, Roboflow
- **Data/ Tools:** Kaggle, Git, Linux Systems
- **Languages:** Python, GDScript, C, Bash, HTML/CSS
- **Web/ Deploy:** Next.js 15, TailwindCSS, Vercel

Experience

Innovative Intelligent Internet of Things

IoT Engineer Intern

2nd Internship – Fire and Spill Detection

June – Aug 2026

- Trained two independent **computer vision models** for real-time fire detection and spill detection from live camera feeds.
- Processed and annotated visual data to optimize model accuracy for dynamic, real-world industrial environments.
- Configured the models to handle continuous video streams, enabling rapid anomaly identification for workplace safety.

1st Internship – Screw Detection and Forecasting

July 2025

- Trained a computer vision model (Roboflow) for screw placement detection; built a regression model forecasting daily energy usage from a California housing dataset.
- Utilized Roboflow for image annotation and dataset augmentation to improve the precision of automated quality control checks.
- Analyzed structured tabular data to identify key features for the regression model, optimizing its predictive performance for energy consumption.

Summer Internship – IIT Roorkee

July 2025

- Completed a 7-day intensive program on **Cyber Security and AI/ML**, covering ethical hacking, network security, and supervised learning through hands-on labs.
- Applied supervised learning algorithms to structured datasets in lab environments to reinforce predictive modeling concepts.

Projects

Cravix – AI Recipe Transformation App

May 2026

Next.js 15, TypeScript, Gemini 2.0 Flash, TailwindCSS

- AI-powered app transforming cravings into healthier alternatives via dynamic goal generation and tradeoff sliders; built resilient API retry logic with mock-data fallback; deployed on Vercel.

SIH – Cleared university-level hackathon

2025

Slope Instability Prediction Pipeline

- Built an **ML pipeline** for real-time slope instability prediction from vibration, moisture, and pressure sensor data; automated SMS/Email/onsite alerts on threshold breach.

Real-Time Document Dependency Graph

October 2025

- Built a Python file-system watcher that triggers live dependency graph updates, automating multi-document impact analysis for a team of 5.

Participation & Competitions

Cravix – AMD Slingshot Ideathon – 3rd Place

May 2026

- Awarded 3rd place at an AMD-sponsored ideathon for Cravix; judged on product vision, real-world AI integration, and UI polish.

Position of Responsibility

Technical Lead – Game Veda (Game Dev Club, VIPS)

2024 – Present

- Mentors junior developers and serves as technical reviewer for the college's game development club.

Brands and Communication Member – Entrepreneurship Cell

2025

- Produced and edited viral and professional reels, significantly boosting the club's online reach and engagement.
