Education

University <i>BTech in Industrial Internet of Things</i>	2024 – 2028
S.R.DAV Public School <i>Secondary and Higher Secondary</i>	2022 – 2024

Skills

IoT Arduino, ESP32, MQ-7 Sensors	Languages Python, GDScript, C, Bash, HTML/CSS
Game Dev Godot 4 (2D & 3D), Unity	Tools Git, GitHub Desktop, Linux Systems
AI / ML Computer Vision, YOLOv5, Roboflow	

Experience

Game Development Intern – Vapronix Web – Developed a grid-based Arrow Puzzle game in Unity with custom level data structures and collision detection supporting dynamic grid sizes (3x3 to 6x6). – Engineered time-based win/fail conditions and automated level loading, optimizing the game loop for mobile.	January 2026
Innovative Intelligent Internet of Things <i>IoT Engineer Intern</i> – Trained a computer vision model in Roboflow to detect screw placements; built an energy consumption forecasting model on a California housing dataset (Kaggle).	July 2025
Summer Internship – IIT Roorkee – Completed a 7-day intensive program on Cyber Security and AI/ML , covering ethical hacking, network security, and supervised learning through hands-on labs.	July 2025

Projects

Autonomous Field Deployment Suitability Analyzer (AFDSA) <i>ESP32, MPU-6050, C++, FreeRTOS</i> – Built an autonomous terrain-surveying robot computing a real-time Deployment Suitability Score via sensor fusion (vibration, tilt, temp, humidity); two-rail power architecture cut IMU noise $\sim 8\times$ and achieved 100% accuracy on 3-class terrain classification across 6 nodes.	March 2026 – Ongoing
SCP-2949 Horror Project – Solo Developer, Godot 4 – Complete 3D horror game with custom GLSL shaders and a Finite State Machine enemy AI featuring a “Weeping Angel” stalking/chasing mechanic driven by real-time player visibility.	March 2026
Cravix – AI Recipe Transformation App <i>Next.js 15, TypeScript, Gemini 2.0 Flash, TailwindCSS</i> – AI-powered app that transforms any craving into a healthier version via dynamic goal generation, tradeoff sliders, and ingredient swaps; resilient API retry logic with mock-data fallback; deployed on Vercel.	May 2026
IoT-Based CO Level Monitor – ESP32 + MQ-7 carbon monoxide monitor with real-time calibration and OLED visualization; co-designed hardware and firmware in a 6-member team.	July 2025
Real-Time Document Dependency Graph – Python file-system watcher triggering live dependency graph updates; automated multi-document impact analysis in a team of 5.	October 2025

Participation & Competitions

- Cravix – AMD Slingshot Ideathon – 3rd Place

May 2026

- Awarded 3rd place at an AMD-sponsored ideathon for Cravix; judged on product vision, real-world AI integration, and UI polish.
- Power Sword – Kenney Jam 2025

July 2025

- Shipped a complete top-down arcade game in Godot 4 under jam time constraints with AI patrol, line-of-sight, and chase systems.
- SIH - Cleared University level Hackathon

2025

- ML pipeline for real-time slope instability prediction from vibration/moisture/pressure sensors; automated SMS/Email/onsite alerts on threshold breach.
- Vibe Clash – GGSIPU East Campus Web Contest

2025

- Built NyaySetu, a full-stack legal-tech platform (React, TailwindCSS, Redux, Framer Motion) with AI chatbot, document analysis, and lawyer directory; recognised for design and functionality.

Position of Responsibility

- Technical Lead – Game Veda (Game Dev Club, VIPS)

2024 – Present

- Mentors junior developers, organizes internal jam sessions, and reviews technical direction for the college’s game development club.
- Brands and Communication Member – Entrepreneurship Cell

2025

- Produced and edited viral and professional reels, significantly boosting the club’s online reach and engagement.
